Strategic Analytics in the Department of Agriculture, Food and the Marine

Catherine Dempsey, Data Management & Analytics, DAFM

DAFM Data Operating Structure

What is Operational Data Analytics?

Using an organisation's data to extract insight to support better decision making

Monitor and logging

monitor product in live environment

Strong governance ensures IT, operations, and analytics work together effectively to manage advanced analytics projects

Sources of Data in DAFM

Sources of Data in Agricultural Departments

Information from customers

- Registration, Central Customer Database
- Application forms, testing data, Animal tag data
- Customer contacts (Photographic data, telephone contacts, letters)

Information from third parties

- Government departments (e.g. CSO, OSI, Teagasc, EPA)
- Private sector (e.g. Abattoirs, Milk Processors, Shipping companies)

DAFM generated information

- Created from our activities (e.g. inspection results, test results, export certs issued)
- Derived data from other sources (e.g. Model scores, statistical data)
- Information about us (e.g. salaries, human resources data)

Fishery data

How we use DAFM data

Descriptive:
what has
happened?

Predictive:
What could
happen in the
future based
on past
events?

Prescriptive:
What should
a business
do?

Descriptive analytics

What it is...

Use of statistical analysis and visualisations to explore and understand data
Identify interesting trends in current/past data etc.

Example: Research Division Dashboard

DAFM has a growing number of dashboards related to different aspects of its work

The dashboards provide some commonly used charts and tables to each division

Allows them to explore data and do custom analyses by defining their own ad-hoc queries and plots

What is AI in DAFM?

Artificial Intelligence

Agricultural Inspector

Avian Influenza

Artificial Insemination

What is Artificial Intelligence in DAFM?

software components (models) that allow systems/applications to recognise and bring context to patterns in data without the rules having to be explicitly programmed by a human.

generate predictions, recommendations, or decisions based on statistical reasoning – Trad AI

create content based on a series of predictions – GenAI

Prescriptive analytics

Data Selection

Farm description dataset, joined with relevant customer data and a binary flag for Forest Owner

Feature Selection

Identifying the variables that carry information for predicting whether a client is a Forest Owner or not

Modelling

- Decision Trees were modelled
- Method of categorising clients based on a set of questions to be answered

Dashboard

- A Dashboard was built visualising the top features
- This Dashboard was built in PowerBI

Forestry Dashboard

This dashboard visualises the top features for classifying Forest Owners from the Forestry Customer Segmentation Project

Exploratory GenAI projects

IT System design and delivery support

Decipher: Analyse content (code) to produce documentation that summarises the purpose of an application, its design, the rules used, and ways to improve its function and performance

Accelerator: Preparing test scenarios manually is one of the key elements of the software development process to ensure the highest quality. AI potentially can reduce time spent on these tasks by 95%

AI Risks

Algorithmic bias: AI may make use of biased source data and generate biased, discriminatory or offensive content and results.

Reputational Risk: When AI systems violate social norms and values, organisations are at great risk, as single events have the potential to cause lasting damage to their reputation.

AI decision making: AI does not replace human judgment and, in some cases prevent informed and contextualised decision-making

Climate: AI uses significant compute resources, particularly GenAI. This may impact our green IT goals.

Supply Chain: The supply chain to support GenAI and in particular GPU is fragile. Building capabilities on GenAI must take this into account.

EU AI Act Cheat-sheet

THE BASICS

- **Definition of AI:** aligned to the recently updated OECD definition
- **Extraterritorial:** applies to organisations outside the EU
- **Exemptions:** national security, military and defence; R&D; open source (partial)
- **Compliance grace periods** of between 6-24 months
- **Risk-based:** Prohibited AI >> High-Risk AI >> Limited Risk AI >> Minimal Risk AI
- **Extensive requirements** for 'Providers' and 'Users' of High-Risk AI
- **Generative AI:** Specific transparency and disclosure requirements

PROHIBITED AI

- **Social credit scoring** systems
- **Emotion recognition** systems at work and in education
- AI used to **exploit people's vulnerabilities** (e.g., age, disability)
- **Behavioural manipulation** and circumvention of free will
- **Untargeted scraping of facial images** for facial recognition
- **Biometric categorisation systems** using sensitive characteristics
- Specific **predictive policing** applications
- **Law enforcement use of real-time biometric identification in public** (apart from in limited, pre-authorised situations)

HIGH-RISK AI

- **Medical devices**
- **Vehicles**
- **Recruitment, HR and worker management**
- **Education** and vocational training
- Influencing **elections and voters**
- **Access to services** (e.g., insurance, banking, credit, benefits etc.)
- **Critical infrastructure** management (e.g., water, gas, electricity etc.)
- **Emotion recognition** systems
- **Biometric identification**
- **Law enforcement, border control, migration and asylum**
- Administration of **justice**
- **Specific products** and/or **safety components** of specific products

KEY REQUIREMENTS: HIGH-RISK AI

- **Fundamental rights impact assessment** and **conformity assessment**
- Registration in **public EU database** for high-risk AI systems
- **Implement risk management** and **quality management** system
- **Data governance** (e.g., bias mitigation, representative training data etc.)
- **Transparency** (e.g., Instructions for Use, technical documentation etc.)
- **Human oversight** (e.g., explainability, auditable logs, human-in-the-loop etc.)
- **Accuracy, robustness and cyber security** (e.g., testing and monitoring)

GENERAL PURPOSE AI

- Distinct requirements for **General Purpose AI (GPAI)** and **Foundation Models**
- **Transparency** for all GPAI (e.g., technical documentation, training data summaries, copyright and IP safeguards etc.)
- Additional requirements for **high-impact models with systemic risk:** model evaluations, risk assessments, adversarial testing, incident reporting etc.
- **Generative AI:** individuals must be informed when interacting with AI (e.g., chatbots); AI content must be labelled and detectable (e.g., deepfakes)

PENALTIES & ENFORCEMENT

- Up to **7% of global annual turnover** or €35m for prohibited AI violations
- Up to **3% of global annual turnover** or €15m for most other violations
- Up to **1.5% of global annual turnover** or €7.5m for supplying incorrect info
- **Caps on fines for SMEs and startups**
- **European 'AI Office'** and **'AI Board'** established centrally at the EU level
- **Market surveillance authorities** in EU countries to enforce the AI Act
- **Any individual can make complaints** about non-compliance

Not yet enacted. Political agreement reached on 8 December 2023.

AI Risk Mitigation

Practice

1. Human agency and oversight
2. Technical robustness and safety
3. Privacy and data governance
